## Introduction

Welcome to **GameGuru**—your ultimate destination for game guides tailored to your favorite titles! Whether you're a seasoned player looking to master advanced strategies or a beginner seeking a head start, we've got you covered with comprehensive guides crafted to enhance your gaming experience.

At **GameGuru**, we believe in community-driven content. Don't see a guide for your preferred game? No problem! Simply request it, and our dedicated team will work to bring it to life. Plus, you can leave your feedback or reviews directly on the homepage, helping us refine and improve our offerings.

Our robust admin system ensures all user-requested games are carefully reviewed, keeping the platform focused and relevant for gamers of all levels.

Dive into a world of knowledge, engage with fellow gamers, and level up your skills—because at **GameGuru**, gaming greatness awaits!

## Project Features

### User Features

1. **Comprehensive Game Guides:** Access detailed, easy-to-follow guides for a wide variety of games.
2. **Guide Requests:** Request guides for games not currently available on the platform.
3. **Comment Section:** Leave reviews and suggestions to help improve guides and the website.
4. **Account Creation:** Sign up for a personalized experience
5. **Login:** Securely log in to access exclusive features and manage your account.

### Admin Features

1. **Request Approval/Decline:** Review and manage user-submitted guide requests.
2. **Admin Login:** Secure access to advanced admin tools for managing content and user interactions.

# Frontend Development

**Contribution of ID : 22341008, Name : Shafayet Amin Zeehan**

The project includes three key pages: a **Create Account** page, a **Login** page, and a **Comment Section**. The **Create Account** page allows new users to register by providing a username, email, and password, with a confirmation step for the password, and a link to the Login page for existing users. The **Login** page facilitates authentication, requiring the user's email and password to access their account. The **Comment Section** displays user-generated comments in a table format, dynamically populated from a database using PHP, with columns for the user's name and comment content. Each section is designed with HTML forms and tables, with seamless user navigation and functionality.

The frontend development for **GameGuru** focuses on two essential features: the **Game Request** page and the **Game Guides** page. The **Request Games** page allows users to submit requests for guides on games not yet available on the platform. This feature includes a straightforward form where users can input details like the game title, ensuring an intuitive and smooth submission process. The **Game Guides** page asks users questions to determine their gameplay style and provides them with the guide that goes best with their requirements. Both pages are designed with **HTML**, **CSS**, and **PHP**, ensuring a responsive and user-friendly experience that adapts seamlessly across devices. The design prioritizes clean aesthetics, ease of navigation, and interaction, creating an engaging environment for users.

### Request Game Info

Fill out the form below to request information about a specific game.

Your Name

Your Email

Game Name

Message (Optional)

**Submit Request**

### Your Game Guide

Based on your preferences, here's how you should approach the game:

Communication: Practice clear and concise communication with your team. Use in-game voice or text chat effectively to share strategies and updates. Planning: Analyze the game map or objectives before each session. Discuss tactics with your team to ensure everyone is aligned. Patience: Stay calm under pressure and avoid rushing decisions. Let the strategy unfold naturally. Study the Game: Watch tutorials, professional matches, or guides to learn advanced strategies and how they're imp

Enjoy playing and make the most of this thrilling adventure!

### Game Title

This is a short description of the game. It explains the game mechanics, the setting, and what the player can expect from the game.

#### Answer these questions to get your desired guide

**Q1. How do you prefer to approach challenges?**

- ☐ A. Strategize before taking action
- ☐ B. Adapt and react quickly
- ☐ C. Improvise and experiment

**Q2. What kind of gameplay pace do you enjoy the most?**

- ☐ A. Slow and methodical
- ☐ B. Fast-paced and action-packed
- ☐ C. Balanced

**Q3. How do you prefer to interact with other players in a game?**

- ☐ A. Collaborate with teammates
- ☐ B. Compete against others
- ☐ C. Play solo

**Submit**

## Contribution of ID : 22301662, Name : Mahir Jawad Chowdhury

I had the opportunity to contribute to **GameGuru** by developing the frontend for the **Admin Panel**. The Admin Panel feature allows the admin to go through the requested games lists. The admin can either choose to **approve** that request or **decline** the request. The page is designed with PHP, CSS and HTML.

# Backend Development

Briefly discuss about Backend Development and add relevant Screenshots (if required) by mentioning Individual Contributions

## Contribution of ID : 22341008, Name : Shafayet Amin Zeehan

The Login, Create Account, and Comment Section functionalities are implemented using PHP and a MySQL database.

- 1.Login: The login page allows users to authenticate by entering their email and password. Upon form submission, the entered credentials are verified against the database. If the credentials match, the user is redirected to either the admin panel or the home page based on their user type.
- 2.Create Account: The create account page enables users to register by providing a username, email, and password. After form submission, the user data is inserted into the database, and the user is redirected to the login page for authentication.
- 3.Comment Section: The comment section allows authenticated users to post comments. The form accepts a username, email, and comment message. The email is verified against the database, and if the user exists, the comment is saved. All comments are then displayed in a table, which is dynamically generated from the database.

Each of these functionalities interacts with the GameGuru MySQL database to store and retrieve user and comment data efficiently.

```
comment_post.php
1 <?php
2 require "connect.php";
3
4 $username=$_POST["name"];
5 $email=$_POST["email"];
6 $message=$_POST["message"];
7
8
9 $confirm_user= "SELECT email FROM customer WHERE email='$email'";
10 $check=mysqli_query(mysql: $conn,query: $confirm_user);
11
12 if ($check->num_rows > 0){
13     $query="INSERT INTO comment VALUES('$username','$email','$message')";
14     mysqli_query(mysql: $conn,query: $query);
15     echo"your comment has been recorded";
16 }
17 else{
18     header(header: 'Location: login.php');
19     exit();
20 }
21
22
```

```
login_post.php
1 <?php
2 require "connect.php";
3
4 $email=$_POST["email"];
5 $password=$_POST["password"];
6
7 $confirm_user= "SELECT * FROM customer WHERE email='$email' AND password='$password'";
8 $check=mysqli_query(mysql: $conn,query: $confirm_user);
9
10
11 if($check->num_rows > 0 and $type="admin"){
12     header(header: 'Location: admin.php');
13     exit();
14 }
15 elseif($check->num_rows > 0 and $type="user"){
16     header(header: 'Location: home.php');
17     exit();
18 }
19 else{
20     echo'Incorrect Email or Password';
21 }
22
```

```
create_account_post.php
1 <?php
2 require "connect.php";
3
4 $username=$_POST["username"];
5 $password=$_POST["password"];
6 $email=$_POST["email"];
7 $type="user";
8
9 $query="INSERT INTO customer VALUES('$username','$email','$password','$type')";
10 mysqli_query(mysql: $conn,query: $query);
11 header(header: "Location:login.php");
12
13
```

## Contribution of ID : 24241111, Name : Shehraj Nayeem Khan

The Game Request and Game Guides features are implemented using PHP and a MySQL database.

1. Game Request Feature: Users can submit game requests by filling out a form with the game title and additional details. Upon submission, the data is validated and stored in the database.
2. Game Guides Feature: The backend fetches and serves game guide data stored in the database, ensuring efficient and optimized queries for fast loading. Guides are dynamically displayed on the frontend based on user preferences or searches, using PHP to handle requests and responses.

Each of these features interacts with the GameGuru MySQL database to store and retrieve data efficiently, ensuring a seamless and responsive user experience.

```

**Contribution of ID : 22301662, Name : Mahir Jawad Chowdhury**

The Admin Panel feature is implemented using PHP and a MySQL database.

- Admin Panel Feature : Users will be able to send a request for certain games they like. However, the admin will receive that request. And from there he will be able to Accept or Decline the request. Based on his decision, the requested table will be removed or will be recorded on the database.

Each of these features interacts with the GameGuru MySQL database to store and retrieve data efficiently.
